

Format	Lecture and Hands-On Workshop		
Presenter/s	Dr Terry Wong		
Date/s	Friday 14 September 2012	Time	9.00am – 5.00pm
Venue	Royal Australasian College of Surgeons 250 – 290 Spring Street, East Melbourne		
Fee	\$1000	Registration Limit	15
CPD Credit	6 hours Scientific CPD		

Posterior composites – How to deliver a natural restoration

A successfully placed direct posterior composite restoration can sometimes be a challenge. The dentist needs to have a sound understanding of bonding, shade determination and has to be adept at handling, shaping and polishing the material.

Furthermore, when you need to restore approximal surfaces, achieving an adequate contact area can be difficult.

This lecture and hand-on program will address these issues and equip the dentist with skills to achieve durable and aesthetic results.

The key learning points:

- Producing a natural, aesthetic posterior composite
- Case selection: when to do direct posterior composites
- Choice of composites to use
- Shade selection
- What instruments make the job easier
- Achieving tight contact points
- Avoiding post-operative sensitivity
- How to save time on fewer occlusal adjustments after completing the restoration

Aesthetic Smile Corrections in Composite Resin

This one day program will focus on the direct placement of composite resin for the correction of aesthetic issues ranging from misshaped or misaligned teeth to discoloured teeth. The lecture component will highlight important aspects of design. Participants will gain a better understanding of how to select shades of composite and how to manipulate and place layers of different shades of composite to produce an improved aesthetic outcome.

The course is designed for the dentist who wants to:

- learn or improve his/her skill on direct composite resin veneers
- gain a better understanding of colour, how to select the appropriate shades of composite and manage discoloured teeth
- refine the skill of shaping/finishing and polishing composite.
